

An aerial photograph showing a river meandering through a landscape of agricultural fields. The fields are in various stages of growth or harvest, with some appearing green and others brown. The river is a dark, winding line through the lighter-colored fields.

# COMET Tools

## *Application Program Interfaces (API) for COMET-Farm™*

Webinar Presentation  
9 June 2020

Mark Easter, Sobha Velayudhan, Mark Layer, Kevin Brown, Amy Swan, and Keith Paustian

Natural Resource Ecology Laboratory  
and Dept of Soil & Crop Sciences  
Colorado State University, Fort Collins, CO

Whole Farm and Ranch  
Carbon and Greenhouse Gas  
Accounting System.

United States Department of Agriculture  
Natural Resources Conservation Service

Carbon and greenhouse gas evaluation  
for NRCS conservation practice planning

The COMET Tools were developed at the Natural Resource Ecology Laboratory located at Colorado State University. The COMET-Tools were developed in collaboration and funding support from the ***NRCS and the Climate Change Program Office at USDA***. Additional support has come from the California Department of Food and Agriculture, the California Air Resources Board, the Farm Foundation for Agricultural Research, and private donors.

Colorado State University

Kerri Steenwerth (Davis)  
Steve DelGrosso (Fort Collins)

## Presentation Roadmap

- Briefly review the COMET-Farm™ Application Program Interface (API)
  - New API Features
    - Improved processing capacity
    - Webhooks interface
    - Error Trapping and Reporting
  - Q&A
- 
- The tool improvements described today came from customer discovery interviews and feedback from users during a January, 2020 presentation.
  - ***No current features have been deprecated.***

# OpenTeam Shared Mural

## GitLab Repository:

<https://gitlab.com/comet-api/api-docs>

# Current COMET-Farm API Access Points

## COMET-Farm API upload page

All modules or any combination

No file selected.

Enter last cropland run and first cropland run  
(set as negative to do all modules)

-1 -1

Enter emailid.If you would like the results send back to a Url, please enter the Url

Email Id :

Url :

- Access the API using POST requests or through the API GUI:

<https://comet-farm.com/home/apiview>

- View status of requests and view the queue length:

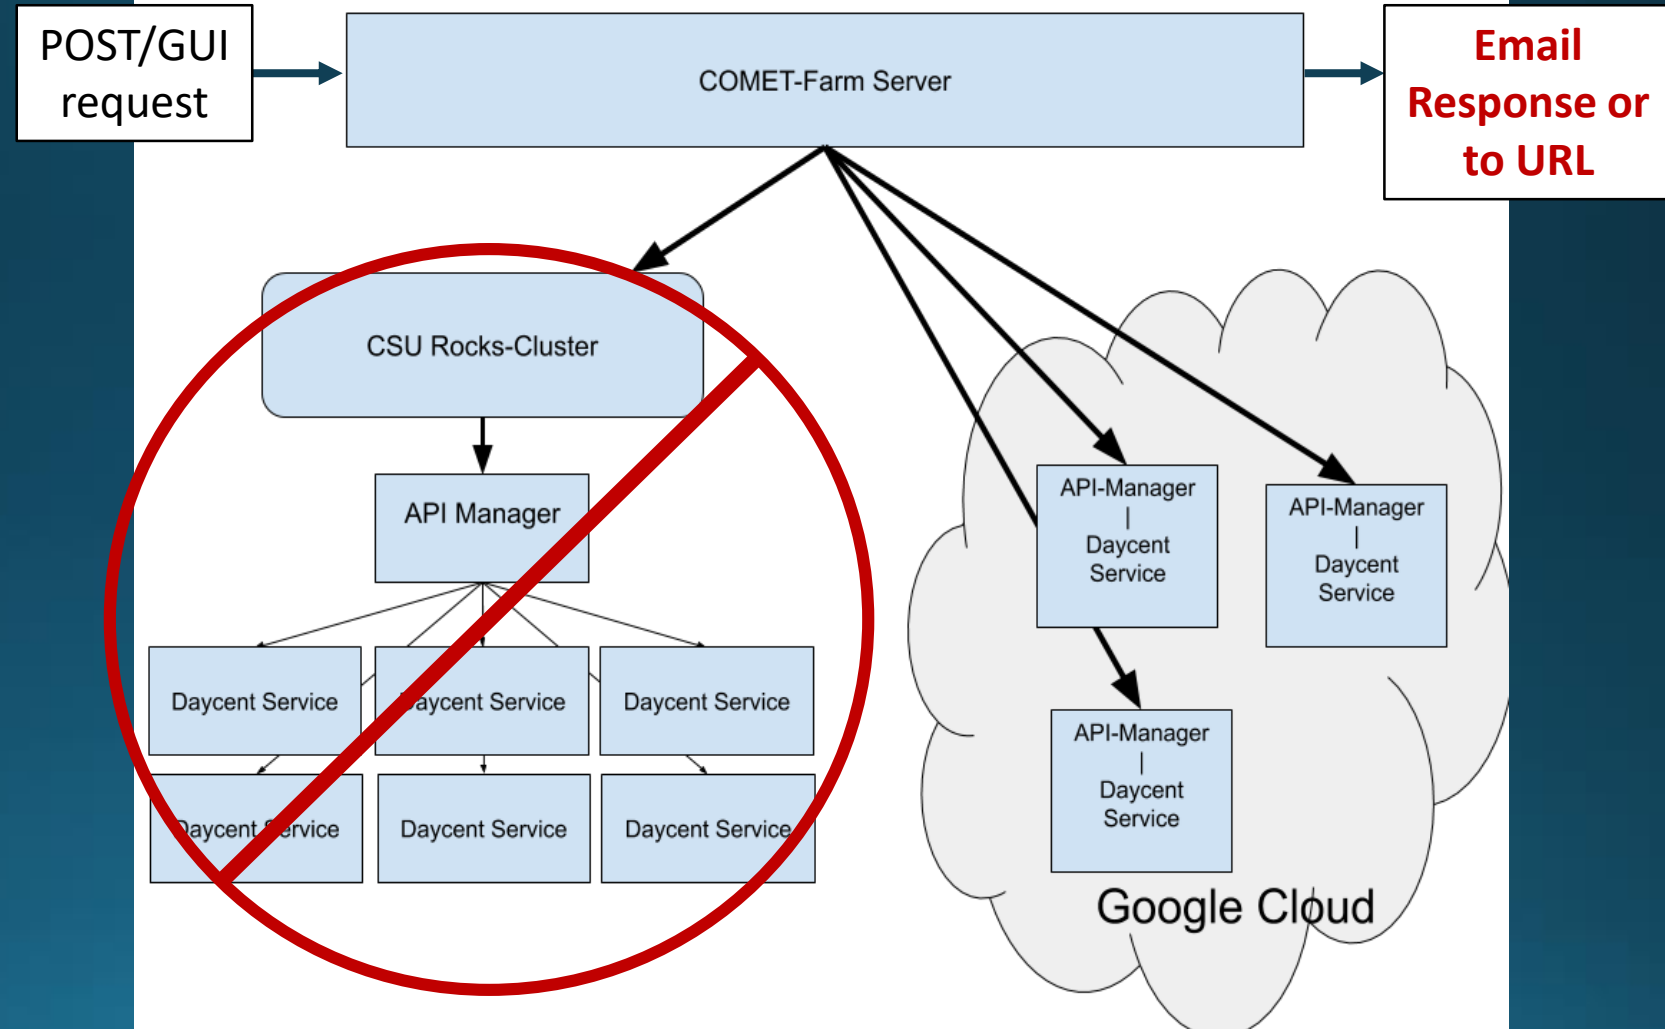

<https://comet-farm.com/home/apistatus>

## COMET-Farm API Status

API slot 0 is running  
Running file:ImportXml.cmt for user: mclayer\*\*\*\*\*  
Current module: Waiting for results from the API service  
Number of bundled dayent jobs: 2  
Total number of dayent jobs: 4  
Size of file (Crop rotation \* Map units): 16  
Estimated runtime (based on past performance): 00:02:32.3750000  
Estimated cost: \$0.069168  
Original rough estimate of runtime: 00:00:00  
Number of croplands threads: 1  
Running for : 00:00:30.6250000  
Cost so far: \$0.013651  
Number of seconds since the thread was updated : 23  
API slot 1 is running  
Running file:CA\_Almonds\_devdev\_2.13.Comet for user: mclayer\*\*\*\*\*  
Current module: Waiting for results from the API service  
Number of bundled dayent jobs: 1  
Total number of dayent jobs: 5  
Size of file (Crop rotation \* Map units): 5  
Estimated runtime (based on past performance): 00:01:23.6200000  
Estimated cost: \$0.037769  
Original rough estimate of runtime: 00:00:00  
Number of croplands threads: 1  
Running for : 00:00:06.6250000  
Cost so far: \$0.00273  
Number of seconds since the thread was updated : 1  
API slot 2 is not running  
API slot 3 is not running  
Number in queue: 0  
Estimated time to finish queue: 00:00:00  
Number in running: 2  
Number in finished: 6695  
Number in failed: 177

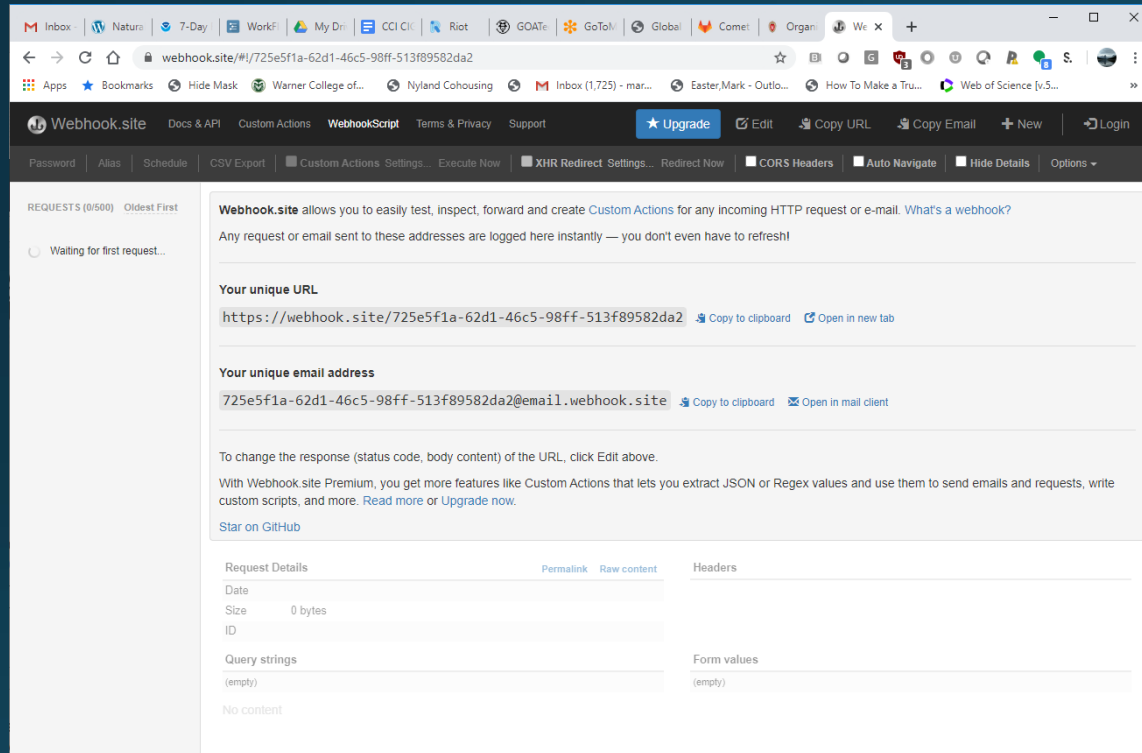

# COMET-Farm API Structure

- Requests are partitioned and distributed for maximum throughput
- Runs in the Google Cloud
- ~~• Can also use our local CSU Rocks Cluster~~

# COMET-Farm API Webhooks Access

webhook.site

- WebhookScript is an easy to use scripting language designed for executing Web-related actions on incoming requests.
- While the other actions like Extract Regex and Send Email allows you to create flows in a visual editor, WebhookScript makes it quicker to create more advanced logic.
- WebhookScript can be combined with other Custom Actions as data can be shared between them using Variables. Syntax is similar to PHP and JavaScript.
- <https://docs.webhook.site/webhookscript>

webhook.script

# COMET-Farm API – Input and Output XML File Format

- COMET-Farm inputs in XML format for easy tool integration
- Rapid bulk processing (hundreds of locations, thousands of scenarios)
- Submitted using POST request to the COMET-Farm website. Results emailed back to the user account's email when complete, or to URL.

```

## COMET-Farm API Error Trapping Classes

- Input File Initial Processing Errors
- Web Soil Survey Issues
- Input File Error Checking and Trapping
- DayCent Processing Errors
- Classes of returned .xml files:
  - COMET-Farm Results
  - DayCent Input Files
  - Error Files (***New***)

# COMET-Farm API Error Trapping: Input File Processing

- Input File Processing Errors:
  - .xml tag not closed
  - Input file not in .xml format
  - Email address not authorized (file will not process)

# COMET-Farm API Error Trapping: Web Soil Survey

## Web Soil Survey Processing Errors:

- Web Soil Survey provides no response (WSS service down)
- No map units available in the Web Soil Survey database
- Map unit mismatch between Web Soil Survey and COMET-Farm database

```
<Errors>
```

```
<ModelRun name="id:99999|farm: Carbon Farm">
```

```
<Error index="8" message="location has zero soil map units. Can not create sites to do Daycent Runs." />
```

```
</ModelRun>
```

```
</Errors>
```

# COMET-Farm API Error Trapping: Pre-Processing Input Check

- Input File Error Checking and Trapping
  - Incorrect .xml tag or tag syntax error
  - Date strings in incorrect format
    - Out of range
    - Incorrect date: example May 32, 2020 (05/32/2020)
    - Harvest dates or cover crop kill dates must be after planting dates
    - Tillage, fertilizer, irrigation must be in the current year cycle
    - Etc.
  - Check input strings against list contents
  - Input numbers within expected range

# COMET-Farm API Error Trapping: Pre-processing Input Check

```
<Errors>
  <ModelRun name="id:99999|farm:Carbon Farm">
    <ErrorMessage>You entered 06/01/2016 in tag 'HarvestDate' for CropYear: 2016 and CropScenario: Current . All harvest
    dates must be after crop planting date.</ErrorMessage>
  </ModelRun>

  <Errors>
    <ModelRun name="id:99999|farm:Carbon Farm">
      <ErrorMessage>You entered Non-Irrigated: Corn-Soybean Incorrect Rotation Name in tag 'Year1980-2000'.This is not an
      acceptable value for this tag.</ErrorMessage>
    </ModelRun>

    <ModelRun name="module:cropland|id:99999|farm:Carbon Farm">
      <ErrorMessage>You entered 05/35/2000 in tag 'PlantingDate' for CropYear: 2000 and CropScenario: Current . This is not
      a valid date. The expected date format for date tag is 'MM/DD/YYYY'</ErrorMessage>
    </ModelRun>

  </Errors>
```

# COMET-Farm API Error Trapping: DayCent Modeling Error

- Classes of errors:
  - Fortran compiler exceptions
  - IEEE errors
  - Model run fails for unknown reasons
- These comprise  $\sim < 1\%$  of errors
- The error file will include a nondescript DayCent Model Run Error
- Notify CSU Team ([appnrel@colostate.edu](mailto:appnrel@colostate.edu)) for assistance

## COMET-Farm API: Next Step Improvements

- Add uncertainty estimates to the output
- Add other API modules (Livestock, Agroforestry, Forestry)
- Allow requesting proxy history (e.g. like drag n' drop) and conservation practices
- Publish a common javascript library of acceptable input values.
- More possible error trapping use cases:
  - Spatial WKT Definition problems: Field boundary validation, multipolygon check, unclosed/invalid vector def'n, overlapping boundaries, holes within vector.
  - Missed crop year (e.g. had data for 2001, 2002, 2004, but no 2003)
  - Multiple crop years (e.g. had data for 2001 twice)
- Continually Improve API documentation
- **<Your Suggestions Here>**

## Further Resources

On-Demand Training Videos available on **You Tube** covering all COMET-Farm™ modules and the COMET-Planner™ tool.

Live Webinars on COMET-Farm™ and COMET-Planner™ available. The training schedule can be found on the COMET-Farm™ ‘Help’ page.

If you would like to request a training for you or your group contact Haley Nagle:
